# File Transfer to the DRMO using MS-DOS Prompt

Before you begin, you must have:

1. Received a DRMO DAISY GENCOMM login and password through your DRMO
2. The name of the folder in your PC that has the file for transfer to the DRMO
3. The name(s) of the GENCOMM files you want to send to the DRMO
4. The I/P address of the DRMO's DAISY computer

A. If your computer is not on a network, dial into your Internet Service Provider (AOL, Netcomm, Prodigy, etc…)
B. From the Windows 95/98 START button, select the Programs folder, MS-DOS icon

MS-DOS Prompt.pif

Within the MS-DOS window enter the following commands:

C. Change the directory to the folder containing the GENCOMM file for transfer. In the User-Based Army National Guard System (UBANGS), the GENCOMM Files are contained in a file folder named for the DRMO, within an outbox folder. Example:

**CD\OUTBOX**
**CD JACKSONVILLE**

If the GENCOMM file was contained in the My Documents folder on your PC, the following example would be the command:

**CD\MY DOCUMENTS**

D. Use the MS-DOS command FTP to log into DRMO DAISY using the DRMO I/P Address. Example:

**FTP 198.25.138.9**

E. Log into the DRMO DAISY computer using your login and password. Reminder: The User ID, password and commands are case sensitive.
F. When the FTP prompt is visible, enter the following commands:

G. **cd /prod/shipdrmo/data/gencomm/upload**
H. **put** [the gencomm file name]  for each file you want to send. Example:

**put w25g1v01.001**
**put w25g1v01.002**
**put w25g1v01.003**

When you finish sending files, enter the following commands:

I. **bye**  This ends the FTP program

J. **EXIT**  This closes the MS-DOS Prompt.

DRMO DAISY then checks the files and processes them within a half an hour.  A text log file is created verifying that the files were acceptable.  To check and see if DRMO DAISY accepted the files:

1.  Repeat steps A-G above.
2.  Type the command get, then the GENCOMM file name, with and .log extension.  Example:

**get w25g1v01.002.log**

3. **bye**  This ends the FTP program
4. **EXIT**  This closes the MS-DOS Prompt.

5. From the Windows 95/98 START button, select the Programs folder, Wordpad icon:

WordPad.lnk

6.. Select file, then open.
7.  Select the "all files" option on the pop-up window.  Identify the folder where you provided the GENCOMM file in step C.
8.  The GENCOMM log file should be there with the .log extension.  Select it.
9.  A message like the one below should show up in Wordpad, either identifying that the file was successfully processed or provide an error message:

Example of error message:

```
Thu Mar 11 16:20:22 EST 1999 SESSION LOG-GENERATOR TO DRMO FILE
TRANSFER,VER:5.0

****************************************************************
1030:DATA DIRECTORY = /prod/shipdrmo/data/gencomm/upload
1030:DATA FILE = u_wpsan.dat.doc VERSION 5.0.0
1030:SESSION LOG FILE = wpsan.dat.log
****************************************************************

>>>>ERROR AT LINE 43 ;  WHEN PROCESSING WPS SECTION
    EXPECTED 77 FIELDS AS WPS RECORD
PROCESS CANCELLED, CHECK DATA FILE AND RESUBMIT <<<<
******AT THE END OF ANALYSIS SECTION******
1030: SESSION LOG/ERROR FILE=wpsan.dat.log
1030: EXITING DATA FILE VALIDATION, CRITICAL ERROR FOUND

Example of successful message:

Fri Mar 12 14:50:10 EST 1999 SESSION LOG-GENERATOR TO DRMO FILE
TRANSFER,VER:5.0

****************************************************************
1030:DATA DIRECTORY = /prod/shipdrmo/data/gencomm/upload
1030:DATA FILE = u_Gencom4.004.doc VERSION 5.0.0
1030:SESSION LOG FILE = Gencom4.004.log
